

IBExpertDemoDB

Use the IBExpertDemoDB for benchmark testing. The UDFs and SQLs necessary to generate the demo database can be found in the IBExpert Developer Studio's /IBExpertDemoDB directory. This [documentation](#) lists the simple steps needed to generate a demo database to the size of your choice.

The IBExpert Benchmarks article illustrates in detail how to utilize this valuable function as a sample web shop.

In the subdirectory, \IBExpertDemoDB, you will find a script, db1_30.sql, which you can use to create a Firebird 3.0 database. Among other things this includes a Soundex function as a [stored procedure](#), as a [stored function](#) and as a [package](#). By these means you can create your own functions in Firebird 3.0 or using your own [UDF](#), and use them in SQL as if they were an internal function.

Furthermore there is a basic implementation for a materialized view alternative in this script, which can also be used with older Firebird versions.

By combining a view with a static table it is possible to avoid calculating complex result sets each and every time, and only recalculate them following expiry of specified time intervals.
