

Autocommit

(3) Autocommit Transactions: This allows all transactions to be committed immediately (i.e. IBExpert no longer asks for confirmation of a commit command and there is NO option to rollback). This is an *EXTREMELY* dangerous option! For example, if an irreversible **DROP** command has been wrongly entered (e.g. instead of typing a `FIELD_NAME` the `DATABASE_NAME` is mistakenly entered), it is still automatically committed.
