

DATE

The `DATE` data type stores values which represent a date. Firebird/InterBase® supports a single `DATE`-type column that requires 8 bytes of storage space. It uses 4 bytes for the date and 4 bytes for the time.

Valid dates are from January 1, 100 AD through February 28, 32,767 AD. *Note:* for `DATE` arithmetic purposes, `DATE 0` (the [integer](#) value of zero) as a `DATE` in Firebird/InterBase® is November 17, 1898.

Different date formats are supported. There are however slight differences between SQL dialect 1 and SQL dialect 3.

- SQL dialect 1: `DATE` also includes a time slice (equivalent to [TIMESTAMP](#) in dialect 3).
- SQL dialect 3: `DATE` does not include any time slice.

Using SQL dialect 1 the default `NOW` for data type `DATE` means current time and date of the server; there is also `TODAY` (only date; the time is always set at midnight, `YESTERDAY`, `TOMORROW`).

Example:

```
SELECT CAST ("NOW" AS DATE) FROM RDB$DATABASE
```

`SELECT CAST` is an SQL dialect 1 command (although it also functions in SQL dialect 3); `SELECT` is used in SQL dialect 3. These values are primarily compatible to older InterBase® versions. When working with SQL dialect 3, the `CURRENT_` constants (see below) should be used as far as possible.

From InterBase® 6 upwards and Firebird there are the following for dialect 3: [CURRENT_TIME](#), [CURRENT_TIMESTAMP](#), [CURRENT_DATE](#) (without quotation marks and without `CAST`). Example:

```
SELECT CURRENT_DATE-1 FROM RDB$DATABASE
```

Result: the date yesterday, etc.

```
SELECT CURRENT_TIMESTAMP- (1/24) FROM RDB$DATABASE
```

Result: the current time minus one hour (one twenty-fourth of a day).

It is possible to specify the display format of a date field under [Environment Options / Grid / Display Formats](#). For the various options available, please refer to [Date Time Format](#).
