

Default

The **DEFAULT** parameter allows a standard value to be defined, should the user not enter a specific value. A **DEFAULT** value can be defined for a **domain** or a **field**. The default value predefined in the domain, can be overridden by the default value entry in the **column/field** definition following this domain.

In IBExpert it can be specified when creating a new **table** and fields or when creating a domain.

The screenshot shows the IBExpert interface for defining a table named 'SALES'. The table has a primary key 'PO_NUMBER' of type 'CHAR' with a domain 'PONUMBER'. Other fields include 'CUST_NO', 'SALES_REP', 'ORDER_STAT...', 'ORDER_DATE', 'SHIP_DATE', 'DATE_NEEDED', 'PAID', 'QTY_ORDERED', 'TOTAL_VALUE', 'DISCOUNT', 'ITEM_TYPE', and 'AGED'. The 'Default Source' column is highlighted in red, showing values like 'new', 'NOW', 'n', and '0' for various fields.
