File Functions

3 functions

With Blobs - 2 functions

Diverse File Functions - 1 function

Output RETURN mechanism if nothing other is published: FREE_IT TestSQLs with NULL run only in FireBird 2.0

Attention! Important!

For security reasons, we swapped out the file functions in our own library because you can access to the filesystem with the database-client without right-system.

If you didn't wont this security-whole, dispense on the file functions and implicitly of the file FAUfile.dll/.so/.dylib in folder ../UDF.
