

# ibesScriptFinalize

Destroys a script object.

## Syntax

```
function ibesScriptFinalize(AScript : THandle) : integer;
```

AScript is a valid handle to a scripter object created with the `ibesScriptInit` function. This function always returns 0 (zero).

All IBEScript.dll interface & callback functions provide `ABlockName` argument which contains the name of the block if execution of that block was initiated as below:

```
EXECUTE IBEBLOCK MYBLOCK ...
```

If block name is missing `ABlockName` parameter will contain an empty string.
