

ibec_CreateReport

Prepares a report from a specified source ([FastReport](#)) and returns prepared report data.

Syntax

```
function ibec_CreateReport(ReportSource : string; Params : array of  
variant;  
Options : string) : variant;
```

Description

ibec_CreateReport prepares a report from a specified source (FastReport) and returns prepared report data. For preparing the initial report please refer to the IBExpert [Report Manager](#).

This feature can be used for executing reports created with the IBExpert Report Manager in command-line mode, for example with batch files. The monthly sales report, invoices or other such reports can be designed in the Report Manager and executed with simple SQL statements. The result can then be saved in the database as a pdf file or other formats and sent by email, exporting using [ibec_ExportReport](#).

Example

```
execute ibeblock  
as  
begin  
    Params['HeaderMemo'] = '';  
    Params['MEM02'] = 2;  
  
    select ibe$report_source from ibe$reports  
    where ibe$report_id = 4  
    into :RepSrc;  
  
    Report = ibec_CreateReport(RepSrc, Params, null);  
    ibec_SaveToFile('D:\reptest.fp3', Report, 0);  
end
```
