

# RECREATE EXCEPTION

Available in: [DSQL](#)

Added in: 2.0

## Description

Creates or recreates an [exception](#). If an exception with the same name already exists, `RECREATE EXCEPTION` will try to drop it and create a new exception. This will fail if there are existing dependencies on the exception.

## Syntax

Exactly the same as [CREATE EXCEPTION](#).

*Note:* If you use `RECREATE EXCEPTION` on an exception that has dependent objects, you may not get an error message until you try to commit your transaction.
