

RECREATE PROCEDURE

Available in: [DSQL](#)

Added in: 1.0

Description

Creates or recreates a [stored procedure](#). If a procedure with the same name already exists, `RECREATE PROCEDURE` will try to drop it and create a new procedure. `RECREATE PROCEDURE` will fail if the existing SP is in use.

Syntax

Exactly the same as [CREATE PROCEDURE](#).

Restriction on recreating used procedures

Changed in: 2.0, 2.0.1

Description

In Firebird 2.0 only, a restriction is in place which prevents anyone from dropping, altering or recreating a [trigger](#) or stored procedure if it has been used since the [database](#) was opened. This restriction has been removed again in version 2.0.1.

Still, performing these operations on a live database is potentially risky and should only be done with the utmost care.
