

ISAPI (Internet Server Application Programming Interface)

The Internet Server Application Programming Interface (ISAPI) is the [API](#) of Internet Information Services (IIS), Microsoft's collection of Windows-based network services. ISAPI was designed to model N-tier architecture. ISAPI enables programmers to develop web-based [applications](#) that run much faster than conventional [CGI](#) programs because they're more tightly integrated with the web server. In addition to IIS, several web servers from companies other than Microsoft support ISAPI.
