

# Service description

Using IBExpertBackupRestore it is possible to set up automatic backups for any number of databases, with separate backup, restore, schedule and log mailing parameters for each database. The service is controlled by the [HK-Software Services Control Center](#) (SCC) utility, which can be found in the [IBExpert Services](#) menu.

The HK-Software Services Control Center (SCC) accommodates the IBExpertBackupRestore service. The IBExpertBackupRestore service supports all features and switches from the Firebird 3 `gbak.exe`, and includes complete [IBEGbak](#) functionality as an internal functionality.

There are some new options, so to be able to use [IBEGbak](#) as an internal functionality, you need to specify *FirebirdInstallFolder*. Be aware that if you use *Internal*, a log file will NOT be created.
