

# F\_UUID1MACCOMPR

function from adhoc in memorial to uuidlib

Entrypoint uuid1maccompr compatible with UTF-8

## Inputs/Outputs

|        |             |                                                            |
|--------|-------------|------------------------------------------------------------|
| Input  | nothing     |                                                            |
| Output | CSTRING(22) | compressed Universally Unique Identifier (UUID) version 1a |

## Syntax

Notice (from uuidlib):

Creates a 22 char string uuid, which is a compressed form where the order of the sections is reversed to allow firebirds index prefix compression to take place. All the characters used in this uuid are valid characters in urls.

TestSQL

```
SELECT F_UUID1MACCOMPR() FROM RDB$DATABASE;
```
