

ibec_Decode

Description

The ibec_Decode function has the functionality of an IF...THEN...ELSE statement.

Syntax

```
function ibec_Decode(Expression : variant; Search : variant; Result :  
variant;  
                    [Search : variant; Result : variant]... [; Default :  
variant]) : variant;
```

- Expression is the value to compare.
- Search is the value that is compared against Expression.
- Result is the value returned, if Expression is equal to Search.
- Default is optional. If no matches are found, the ibec_Decode will return Default. If Default is omitted, then the ibec_Decode
- function will return NULL (if no matches are found).

Example

```
execute IBEBlock (CityCode integer)  
returns (CityName varchar(100))  
as  
begin  
    CityName = ibec_Decode(:CityCode, 1, 'Berlin', 2, 'Rome', 3, 'Bangkok',  
'Unknown');  
    suspend;  
end
```
