

ibec_json_SelectNode

Selects a node using its name/path/index relatively to the specified JSON node.

Syntax

```
function ibec_json_SelectNode(JSONNode : variant; Expression : variant;  
Options : integer) : variant;
```

JSONNode	Node which will be used as a start point for searching.
Expression	Can be a simple name, path or ordinal index of node in the list of children.
Options:	The following options are available:
__jsonIgnoreCase	Ignore character case when searching by name/path. By default search is case sensitive.
__jsonSearchByName	Search node by name.
__jsonSearchByIndex	Search node by its ordinal index.

If `jsonSearchByName` or `jsonSearchByIndex` are not specified, searching will be performed depending of the type of the Expression. If the Expression is of a string type - searching by name will be performed. If it is of an integer type - searching by index will be performed.

Function returns a pointer to the selected node or NULL if the node is not found.
