

# ibec\_RecreateUser

The `ibec_RecreateUser` function first tests whether a specified user exists or not. In the case of the specified user existing, it deletes his login record and recreates it again using the properties specified. Otherwise it just creates a new login record.

## Syntax

```
function ibec_RecreateUser(ConnectOptions, UserData : string) : variant;
```

All functions return NULL if there were no errors, otherwise they return an error message text.

Please refer to [ibec\\_CreateUser](#) for the parameter lists for `ConnectOptions` and `UserData` options, and examples.

If the server name is not specified the connection will be established with the local server using the local protocol. TCP/IP will be used when the server name is specified but the protocol is not specified.
